1 Introduction

1.1 Problem Statement

Clearly define the problem your project addresses. Explain its relevance in the scientific or practical context.

1.2 Motivation and Objectives

Explain why this problem is important. State your main objectives and hypotheses.

Example of citation [1].

2 Data

2.1 Data Sources

Describe where the data comes from, collection methods, and aggregation process.

2.2 Data Quality and Preprocessing

Discuss missing values, outliers, normalization, feature encoding, or transformations.

2.3 Feature Description

Provide a table or list explaining each feature and its meaning. Optionally, include relationships between features.

3 Methods

3.1 Model Overview

Briefly describe the models used. Include general principles (e.g., linear models, random forests, neural networks).

3.2 Implementation Details

Mention important parameters, software/libraries used, and cross-validation setup.

4 Results

4.1 Model Comparison

Compare models quantitatively (accuracy, RMSE, AUC, etc.) and qualitatively (strengths/weaknesses).

4.2 Feature Analysis

Analyze the impact of key features on model performance (e.g., feature importance, correlation).

4.3 Failure and Success Cases

Highlight scenarios where the models perform well or poorly. Include illustrative figures or tables.

Figure 1: Caption describing the figure.

5 Discussion

Interpret the results. Relate findings to your original objectives. Discuss limitations and possible improvements.

6 Conclusion

Summarize your work, key findings, and potential future directions.
